

Exercise

Question: Consider the following list:

```
ids=["B3","\nB4","\nB5","\nB6"]
```

Then, write a program that produces a text file which looks like this:

TIP: If you don't know where to start, please scroll to the next page for some hints.

HINT 1: Consider using the *with* method to create the file and the *for* loop to write the list items inside the file.

TIP: Try to solve the exercise thinking of the above hint. Excellent if you solve it. If that hint is not enough, more hints await for you in the next page. Keep scrolling!

HINT 2: You should first create a file using the *with* method, and while the file is opened, you should create a loop that iterates through the list items in the next line after *with*. Then, you should apply the *write* method to the opened file under the *for* line.

TIP: If you are almost there, but something seems to be not working, then please see the next PDF lecture for the solution.
